

Ariel Berjit

Senior Full Stack SaaS Engineer (React / Next.js / TypeScript / Node.js / Cloud Architecture)

✉ berjitariel342@gmail.com  linkedin.com/in/ariel-berjit-a29a41405  Bacolod City, Philippines

SUMMARY

Senior Full Stack SaaS Engineer with 10+ years of experience designing, building, and delivering production-grade web applications, SaaS platforms, dashboards, and cloud-native systems.

Strong expertise in **React, Next.js, TypeScript, Node.js, Express, GraphQL, REST APIs, and modern SaaS architecture**, with proven experience creating scalable frontend systems, reusable component libraries, authentication workflows, multi-user platforms, and data-driven applications.

Experienced in transforming product requirements into polished, responsive, and maintainable SaaS products from MVP through production deployment. Skilled in building clean architectures, designing API-driven platforms, optimizing performance, and delivering reliable systems using modern engineering practices.

Hands-on experience with **AWS, GCP, PostgreSQL, MongoDB, CI/CD pipelines, GitHub workflows, and cloud deployments**, with strong product ownership and the ability to independently deliver high-quality solutions. Experienced using modern AI development tools including **ChatGPT, Claude, and AI-assisted coding workflows** to accelerate development while maintaining code quality, architecture standards, and engineering discipline.

SKILLS

SaaS & Product Engineering: SaaS Application Architecture | MVP Development | Dashboard & Admin Platform Development | Multi-user Workspace Systems | Role-Based Access Control (RBAC) | Authentication & Authorization Flows | Marketplace & Service Request Platforms | Product Requirement Implementation | Scalable Frontend Architecture

Frontend Development: Next.js | React.js | TypeScript | JavaScript ES6+ | Tailwind CSS | shadcn/ui | Component-Based Architecture | Responsive Dashboard Design | State Management | UI Performance Optimization | Modern Animation Libraries | Design System Development

Backend Development: Node.js | Express.js | GraphQL | REST APIs | Microservices Architecture | API Design | Third-Party Integrations | Background Processing | Distributed Systems

Database & Data Architecture: PostgreSQL | MongoDB | Prisma ORM | Database Design | Data Modeling | Query Optimization | Indexing Strategies | Performance Tuning

Cloud & DevOps: AWS | GCP | Vercel Deployment | CI/CD Pipelines | GitHub Workflow | Cloud Architecture | Monitoring & Logging | Deployment Automation

Engineering Practices: Clean Architecture | System Design | Code Reviews | Automated Testing | Debugging | Technical Documentation | Agile Development | AI-Assisted Development (ChatGPT, Claude, Cursor)

Collaboration: Agile Development, Cross-Functional Collaboration, Technical Documentation, Problem Solving

EXPERIENCE

Apex Fintech Solutions

10/2022 – 02/2026 | Remote

Senior Full Stack Engineer (React / TypeScript / Node.js / SaaS Platforms)

- Designed and delivered scalable SaaS applications using React, TypeScript, Node.js, and cloud-native architectures, supporting complex business workflows and high-volume user interactions.
- Built modern dashboard experiences with reusable React components, scalable UI patterns, responsive layouts, and performance optimization techniques to improve user experience and maintainability.
- Developed robust backend services using Node.js, Express, GraphQL, and REST APIs, enabling secure, flexible, and efficient communication between frontend applications and distributed systems.
- Architected API-driven platforms with clean separation between frontend, backend, and data layers, improving scalability, development velocity, and long-term maintainability.
- Implemented authentication workflows, authorization patterns, and user access controls supporting secure multi-user SaaS application environments.
- Designed PostgreSQL and MongoDB database structures with optimized schemas, indexing strategies, and query improvements to support reliable application performance.
- Created reusable frontend component systems and engineering standards that accelerated feature development across multiple product teams.

- Integrated third-party services and internal APIs to expand platform capabilities and enable seamless data exchange across applications.
- Managed AWS cloud environments, deployment pipelines, monitoring solutions, and production infrastructure supporting reliable application delivery.
- Improved application performance through frontend optimization, efficient state management, backend tuning, caching strategies, and database improvements.
- Leveraged AI development tools including ChatGPT, Claude, and Cursor to accelerate implementation, debugging, and technical problem-solving while maintaining engineering quality.
- Collaborated with product managers, designers, and engineers to translate product requirements into polished SaaS features and production-ready solutions.
- Led architecture discussions, code reviews, and technical improvements to establish scalable development practices and reduce technical debt.
- Investigated production issues, performed root-cause analysis, and implemented reliable solutions to improve system stability and availability.

Endava, Senior Full Stack Engineer

07/2020 – 08/2022 | Remote

- Developed scalable full-stack SaaS-style applications using React, TypeScript, Node.js, and cloud technologies, delivering reliable solutions for complex business requirements.
- Built responsive dashboards and user-facing platforms with reusable component architectures, improving consistency, usability, and development efficiency.
- Designed and implemented backend services using Node.js, Express, REST APIs, and distributed system patterns to support scalable application workflows.
- Created clean frontend architectures with modular components, optimized state management, and maintainable code structures for long-term product growth.
- Implemented authentication systems, API integrations, and business logic workflows supporting secure and reliable application experiences.
- Designed and optimized MongoDB and relational database models to improve query performance, scalability, and data reliability.
- Developed asynchronous processing systems, background jobs, and service integrations to handle high-throughput application workflows.
- Collaborated closely with product teams to transform specifications into functional features while maintaining high engineering standards.

Thoughtworks, Full Stack Developer

09/2015 – 06/2020 | Remote

- Developed modern web applications using React, JavaScript, TypeScript, and backend technologies, delivering scalable and maintainable software solutions.
- Built reusable frontend components and responsive interfaces following component-based architecture principles and modern development practices.
- Designed and implemented backend APIs, integrations, and business services using Node.js and enterprise application frameworks.
- Created optimized database schemas and improved query performance to ensure efficient data access and reliable application behavior.
- Worked on distributed applications requiring scalability, clean architecture, and strong engineering discipline across development teams.
- Collaborated with designers, engineers, and stakeholders to deliver production-ready features aligned with business requirements.
- Improved legacy systems through refactoring, architectural enhancements, testing improvements, and performance optimization initiatives.
- Supported continuous delivery practices through debugging, documentation, automated testing, and collaborative engineering workflows.

EDUCATION

Singapore Institute of Technology (SIT), B.Sc. in Computer Science

08/2012 – 07/2015
